## Continuous Weather Information

### Programming

Weatheradio broadcasts a continuous cycle of weather information tailored to the interests and needs of the local users. The program is repeated and updated at regular intervals. The program cycle consists of:

- Weather watches and warnings
- The latest public weather forecasts
- The latest marine forecasts (where applicable)
- Weather observations updated hourly

### Weather Warnings... Now With SAME Technology

New for 2007 is an upgrade of the warning capabilities of Weatheradio to take advantage of Specific Area Message Encoding (SAME) technology. SAME is a digital data burst that accompanies the radio signal providing information on the type of warning and which small-scale regions are affected. With a new SAME-capable receiver, listeners have the option of programming their radios to only alert for certain types of bulletins and only for their local area. Canadian Location Codes (CLC) has been assigned throughout Canada to describe these small areas.

With SAME capability, Environment Canada's Weatheradio network will be well positioned to accommodate non-weather-related warnings and would become an integral part of an eventual Canada-wide public alerting service in collaboration with other authorities.

For those with older radios that are not SAME-capable, an audible warning tone will still be used to alert listeners that a warning has been issued, or to trigger a receiver to go from standby mode into broadcast mode.

### More Information

More information about Environment Canada's Weatheradio network can be found on the Internet at: [www.msc-smc.ec.gc.ca/msb/weatheradio/](http://www.msc-smc.ec.gc.ca/msb/weatheradio/). Here you will find network updates, transmitter coverage maps and information, SAME event codes, CLC region codes, public alerting information, severe weather advice, a list of Weatheradio dealers, reception advice and frequently asked questions. If you have questions, but do not have access to the Internet, you may call Environment Canada at 1-800-668-6767.

For more information about Environment Canada and its programs, please visit the Green Lane on the Internet at: [www.ec.gc.ca](http://www.ec.gc.ca).

Revised on March 2007

### Environment Canada's Weatheradio Network

Environment Canada's Weatheradio network is a nationwide network of radio stations broadcasting weather and environmental information 24 hours a day in both official languages. This emanates directly from Environment Canada's storm prediction centres. Weatheradio:

- Transmits weather information on one of seven channels in the VHF radio band
- Broadcasts on ordinary AM or FM in selected areas
- Provides up-to-the-minute weather warnings, forecasts and reports
- Allows instant access to the weather details you need
- Similar stations broadcast throughout the U.S.A. and Bermuda

### How Can I Receive Weatheradio?

Since Weatheradio mainly broadcasts on the VHF band, listeners require a special Weatheradio receiver, a VHF marine radio, or any multi-band radio that has a VHF or PSB band on it. Reception will be best on radios where individual weather channels can be selected, or have a digital frequency display. Receivers can be found at many electronic, marine and outfitting stores. Be sure that the radio covers 162.400 to 162.550 MHz or weather (WX or WB) channels 1 through 7. Radio coverage varies depending on terrain and quality of receiver and antenna. Typical coverage is up to 60 km from the transmitter.
